

# ROS Industrial

LIU Yao

ECNU Intelligent Robot Lab

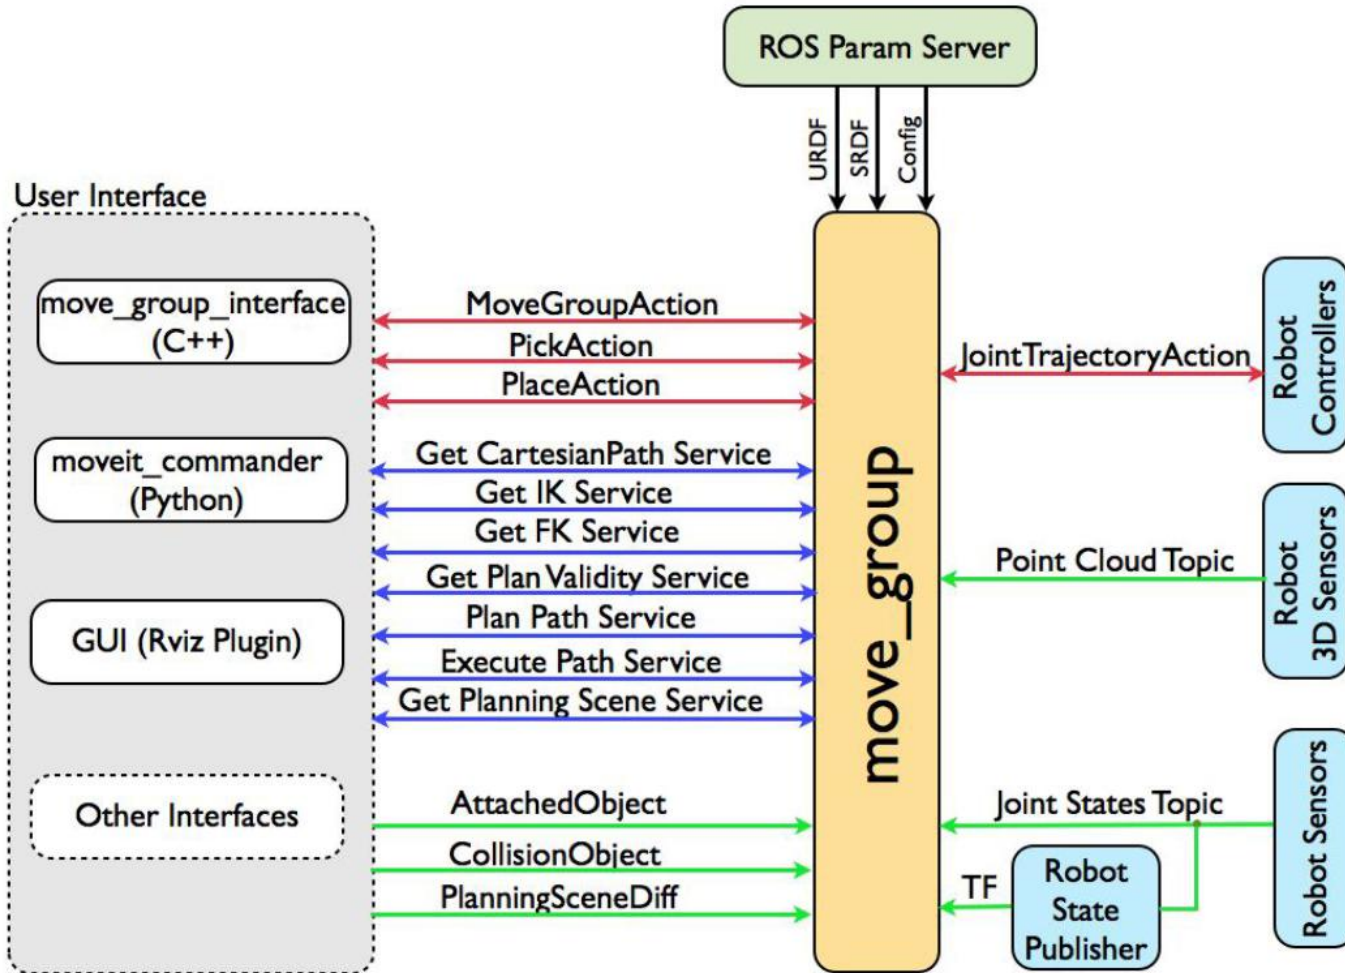

# Movelt!: Overview

- Motion Planning for industrial robot

## HowTo: Set Up a New Robot

1. Create a URDF
2. Create a Movelt! Package
3. Update Movelt! Package for ROS-I
4. Test on ROS-I Simulator
5. Test on “Real” Robot

- ROS packages for robot modeling
  - robot\_model:
    - urdf
    - joint\_state\_publisher
  - robot\_state\_publisher
  - xacro

# URDF: Example

- ABB + gripper + workpiece
  - `$ roslaunch lesson_xacro lesson_xacro.launch`
- Keyboard Control
  - modify launch file

# Movelt! Package

  
abb\_irb2400\_  
moveit\_controller\_  
manager.launch.xml

  
abb\_irb2400\_  
moveit\_sensor\_  
manager.launch.xml

  
default\_  
warehouse\_db.  
launch

  
demo.launch

  
fake\_moveit\_  
controller\_  
manager.launch.xml

  
joystick\_control.  
launch

  
move\_group.launch

  
moveit.rviz

  
moveit\_rviz.launch

  
ompl\_planning\_  
pipeline.launch.xml

  
planning\_context.  
launch

  
planning\_pipeline.  
launch.xml

  
run\_benchmark\_  
ompl.launch

  
sensor\_manager.  
launch.xml

  
setup\_assistant.  
launch

  
trajectory\_  
execution.launch.  
xml

  
warehouse.launch

  
warehouse\_  
settings.launch.xml

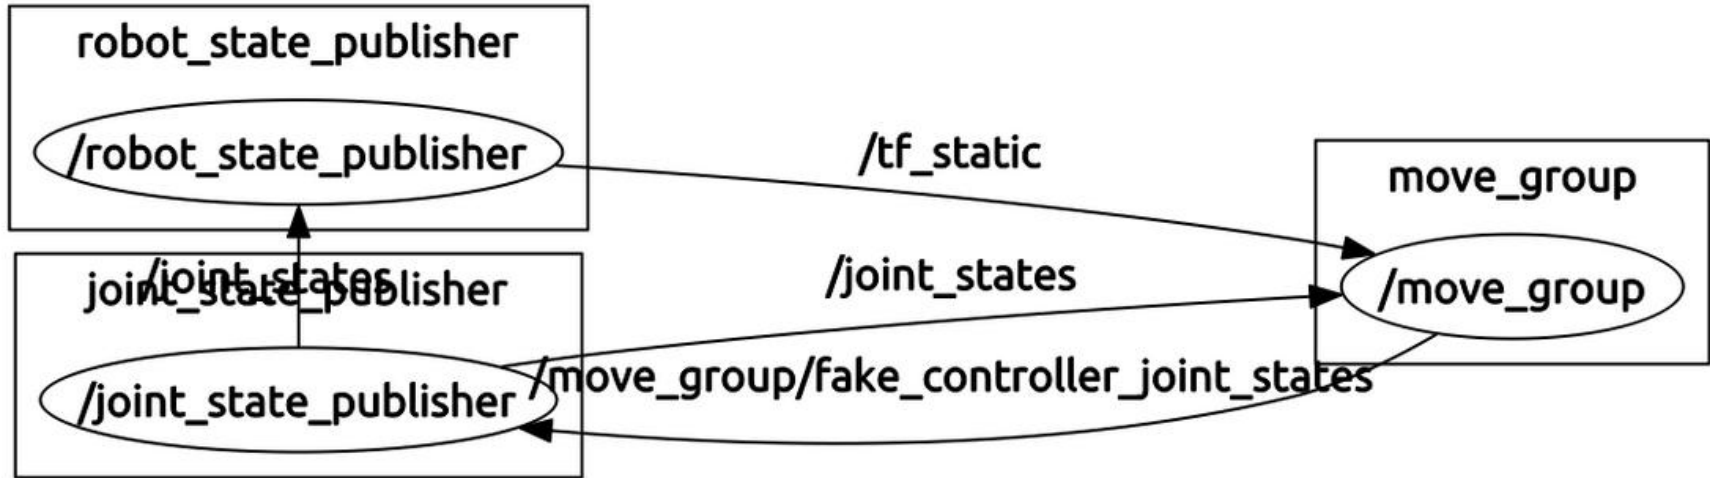

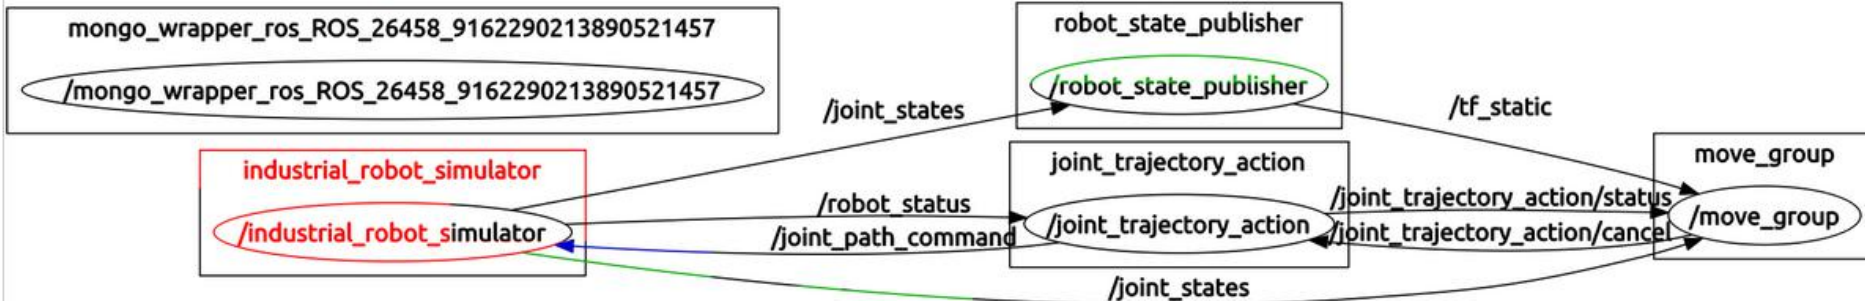

# Movelt!

roslaunch demo.launch

roslaunch moveit\_planning\_execution.launch

# Motion Planning using C++

- `$ roslaunch irb2400_moveit_cfg moveit_planning_execution.launch`
- `$ rosrun lesson_move_group lesson_move_group_1`
